

TB62708N

16 Bit Constant Current LED Source Driver with Shift Register and Latch Functions

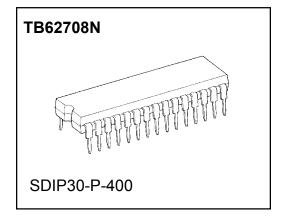

Product Description:

The TB62708N is specifically designed for LED display applications. The Bi-CMOS device has 16 Bi-polar constant current output source channels and includes CMOS shift register and latch functions.

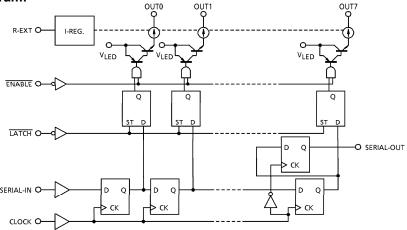

The LED drive current is programmed by the installation of a single resistor per device. Current is programmable from 5-90mA and is held constant across all 16 source outputs effectively compensating for the inherent circuit and component variables which affect the brightness of the LEDs.

Features:

- Current Source Device
- 16 Constant Current Output Channels
- Current Programmable from 5-90mA
- 5V CMOS Compatible Inputs
- 15MHz Max Clock Frequency (Cascade)

Timing Diagram:

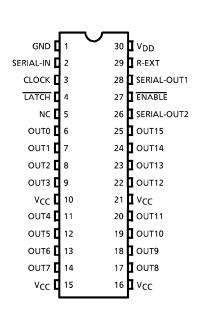

Latches are:

- 1. Level Sesitive
- 2. Not edge sensitive
- 3. Not clock synchronous
- 4. Passing Data when LATCH is H
- 5. Hold Data when LATCH is L

All Outputs are OFF when ENABLE is H and ON when ENABLE is L.

Terminal Description & Pin Out:
